

If you do not already have a Home Page Folder then you need to choose to have your Home Page Folder created by following the directions pictured below.

Do not move your Home Page Folder off your Desktop, or it will not work properly. If you inadvertently move this folder off your Desktop, you can move it back, and it will work again.

With your Home Page folder open, choose:
File/New/New Document Special/HCK2 Web Page

This will create a new, blank web page within your Home Page folder.

Since this will be your main page, rename it as "Home Page" in the Page Link Name field – If it is not the main page, name it accordingly.

Each new page can be duplicated from a Template page that will be discussed later on.
