

## Side Navigation

The Side Navigation is one place you can put the links to other documents on your web site. Choose colors that compliment your color scheme.

If you wish to use the Side Navigation, be sure to check that option.

In the example below, one section is titled *Student Info* and below it will show two links, that will link to two other documents that will reside in the home page folder and designed based on duplicates of the template.

The Header, *Student Info* will not link to a page so the link path will be left blank. The remaining two links will be directed to other pages. In this example there will be two additional documents inside the Home Page folder. One called *Homework Policy* and the other called *Behavior*.

This column is what will appear on the web page and become the link that viewers will click on.		This column is the actual file name or Internet address that is being linked to and does not have to be the same name as the link.	
<input checked="" type="checkbox"/>	Header	School Info	
<input type="checkbox"/>	Header	Homework	Homework
<input type="checkbox"/>	Header	Course Outlines	Outlines
<input checked="" type="checkbox"/>	Header	Parent Info	
<input type="checkbox"/>	Header	Homework Policy	Homework Policy
<input type="checkbox"/>	Header	Behaviour Expecations	Behaviour

This configuration will require an additional four pages to be added to the Home Page folder. They will have to be named *Homework*, *Outlines*, *Homework Policy*, and *Behavior*.

It's time to take another look at your web page.

If you have it the way you want it, you can create a Template or profile page from which all other pages will be created. The *Features* section is normally only used on the main home page so we will return to this later once we have created the *Template*.
