

Getting Started...

The first thing you will need to do on any computer you use to build and/or edit your web pages is merge the Home Page Construction Set form to your current logged in settings file.

To do this, double-click on the

 HCK Settings File v2.fc

file found within the Home Page Construction Kit folder which is in the **All Staff Conference**. When you do this, you will be presented with this dialog box. Click on Update to merge the form.

You will have to update this file once on each computer you use to update your web page (i.e. your school laptop, your desktop at home, etc.)
